

## R-VAN Nozzles Featuring Complete Hand Adjustability

**RAIN BIRD**

*With complete hand adjustability, Rain Bird R-VAN Nozzles offer the benefits of low precipitation rate application with thicker wind cutting streams, saving water and delivering a healthy, beautiful landscape.*

### **Application:**

R-VAN Nozzles are ideal for watering landscapes of various shapes, including sloped areas and heavy clay-soils where water needs to be applied more slowly and to fight erosion.

### **Outstanding Results:**

- You may live in an area with low precipitation rate requirements. The 0.60 in/hour precipitation rate of the RVAN allows you to meet those requirements while shortening your sprinkler run times compared to competitive nozzles.
- The even coverage and low precipitation rate of the RVAN Nozzles makes them the perfect choice for homeowners looking to save water when dealing with sloped applications or heavy clay-soils.
- The stronger streams and larger water droplets fight wind and prevent misting and airborne evaporation so more water is delivered to the target area – even in windy conditions.
- Water driven rotation means there are no gears to strip out, leading to longer nozzle life expectations.
